

MOBILEYE® 8 CONNECT™

SAFER. SMARTER. AUTONOMOUS READY.

Mobileye takes road safety technology further with Mobileye 8 Connect™, an aftermarket collision avoidance system with enhanced advanced driver assistance system (ADAS) features, connectivity, and actionable data insights.

REAL-TIME ALERTS DAY & NIGHT

Mobileye reduces the risk of a collision by warning the driver with visual and audio alerts in real time, providing the critical seconds needed to prevent or mitigate a collision.

*New features/applications expected to be introduced during 2019; however, Mobileye cannot guarantee their introduction in particular forms or by any particular time.

Powered by Mobileye's latest processor – EyeQ®4 and an improved camera with wider field of vision – the system is mounted behind the windshield. Mobileye 8 Connect™ can be retrofitted into almost any vehicle on the road.

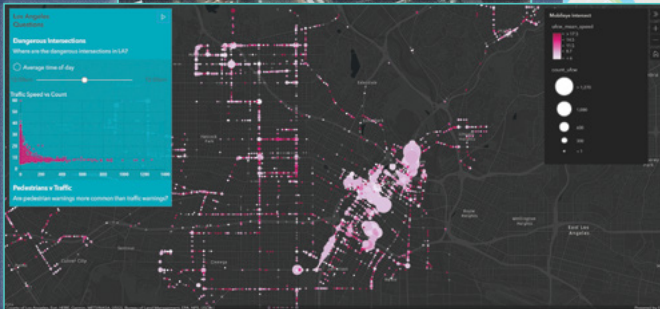

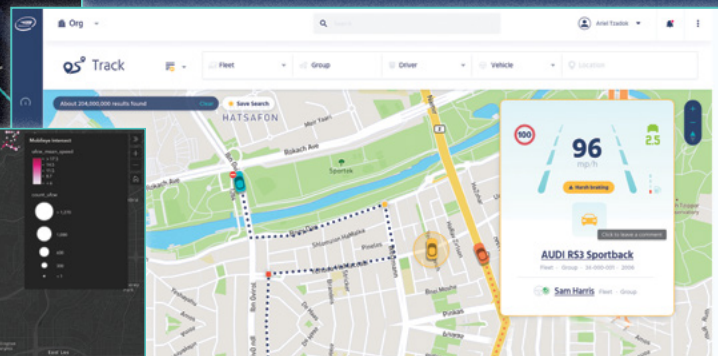

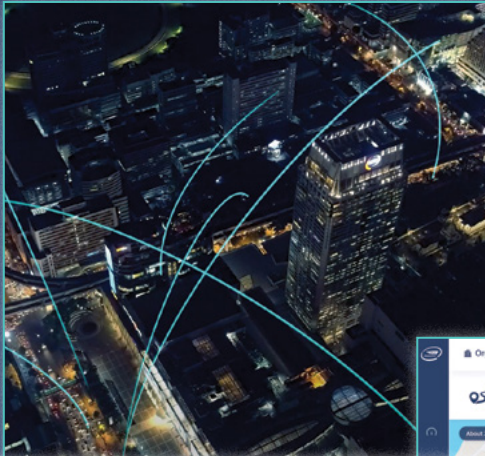

SMART ADAS FOR SAFER ROADS

Harnessing the power of the crowd and fleet vehicles, Mobileye 8 Connect can empower decision-makers on a whole new scale, while making your city streets safer today.

SAFER DRIVING WITH SMART ADAS

Protect drivers and vulnerable road users with the latest collision avoidance technology. Mobileye 8 Connect™ features Smart ADAS - the system will adjust the alerts configuration based on driver behavior, environmental changes, real-time alert data and crowd sourced notifications.

HOT SPOT MAPPING FOR SMART CITIES

Mobileye 8 Connect allows municipal fleet managers to access an online map displaying the accident hot spots on transit routes based on the alert data. Leverage this valuable information for city infrastructure improvements.

ACTIONABLE ROAD DATA

As vehicles equipped with Mobileye 8 Connect drive around a city, they can collect data helping to make it safer and smarter such as:

- Surveying traffic lights and signs
- Weather Events
- Road Markings
- Construction areas and more
